Introduction

This volume contains the data used in the evacuation transportation analysis presented in volume 4. The data is divided into seven different sections, with the first five sections representing the "input" data that was used to develop the transportation analysis model. The last two sections represent the "output" data for each of the different model scenarios. Volume 4 contains a detailed discussion about each of these data items and how the information presented here was used in the analysis. The seven sections include the following:

Section A – Transportation Evacuation Zone (TEZ) Data

Section B – Model Network Attribute Data

Section C – Shelter Database

Section D – Behavioral Data

Section E – Evacuation Zones

Section F – Model Output for Base Scenarios

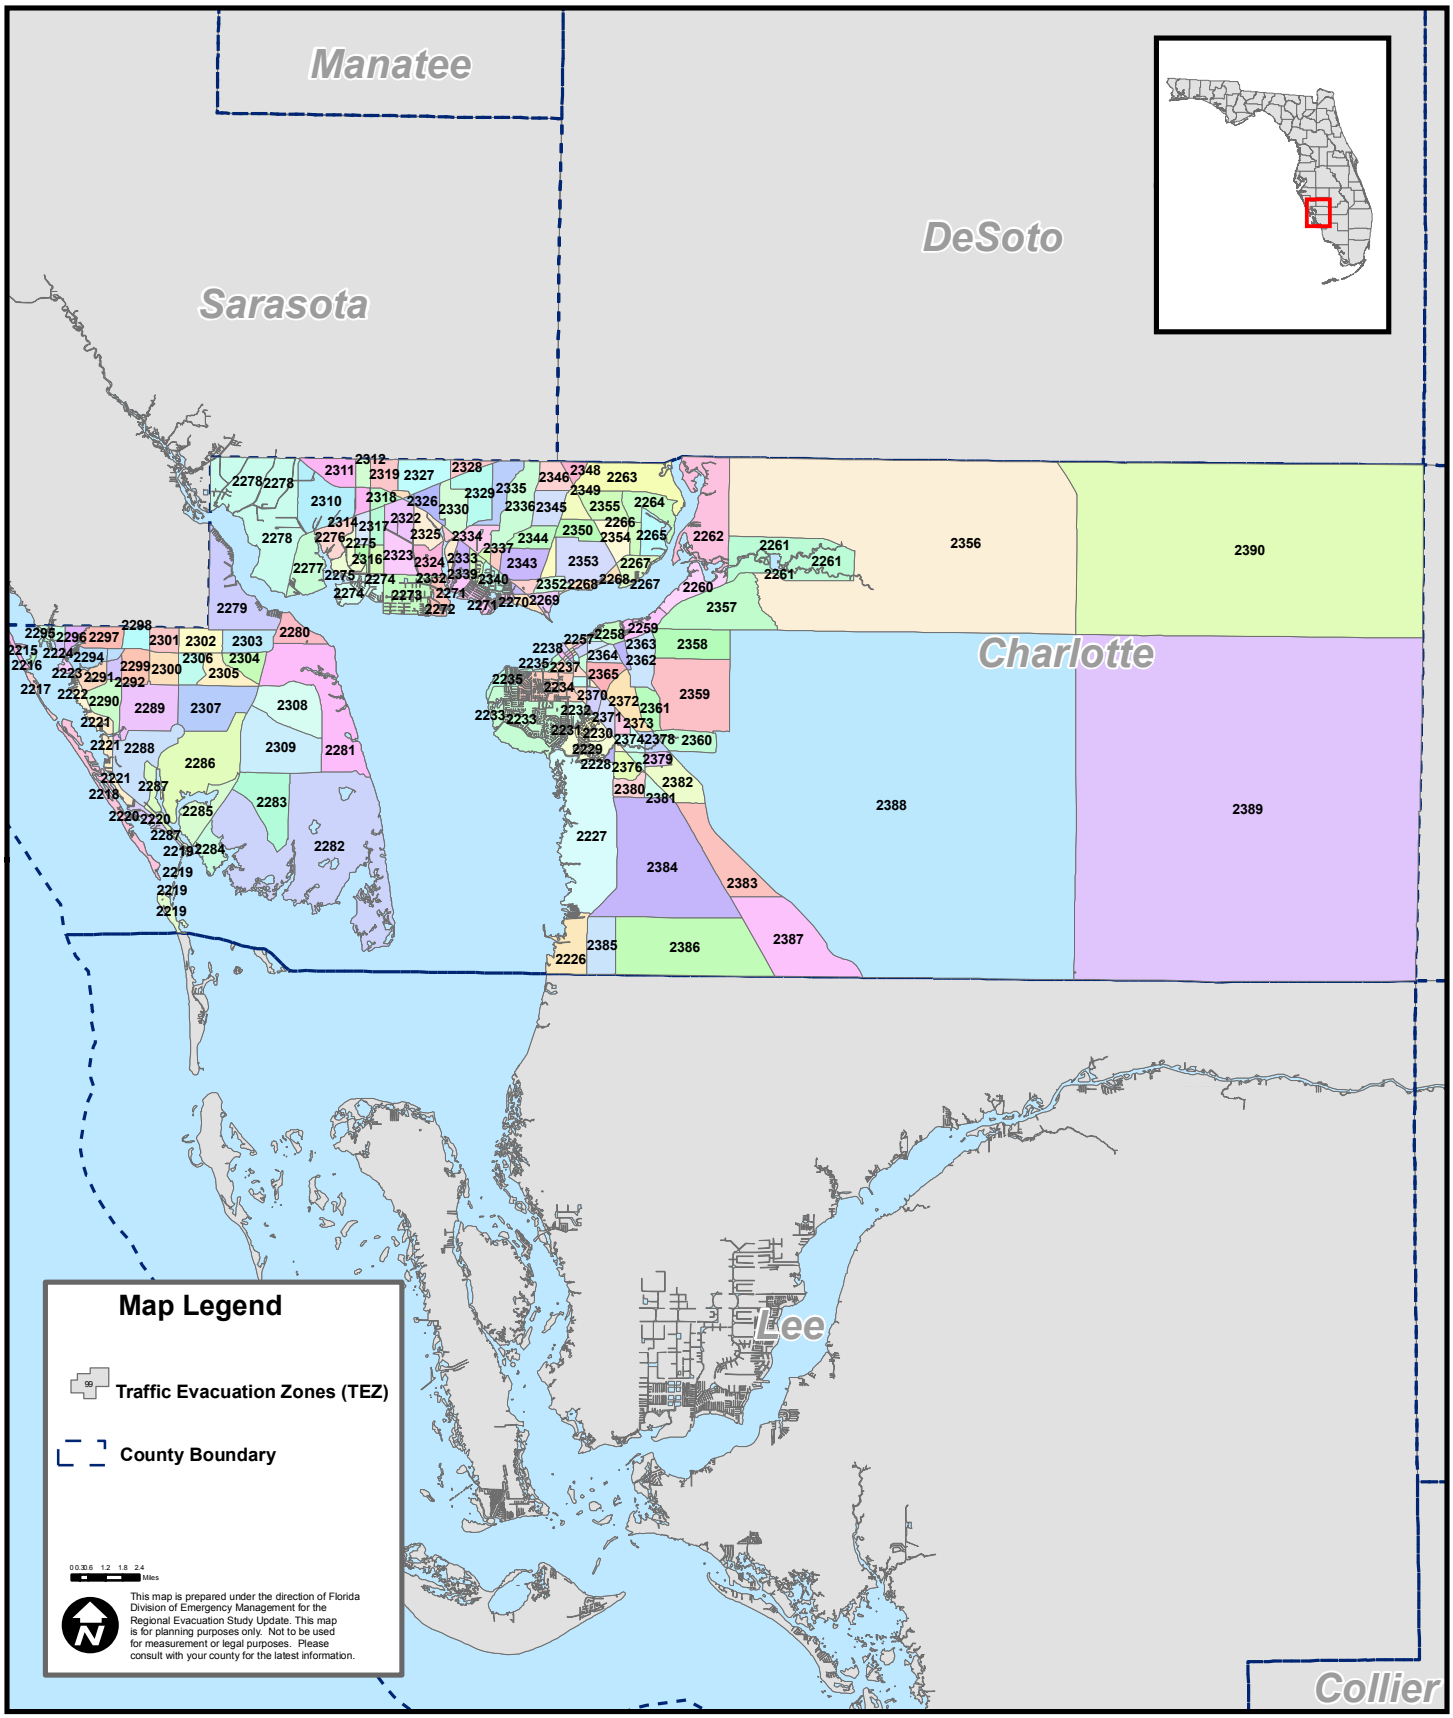

Section G – Model Output for Operational Scenarios

Model Network Attribute Data

The model network for the Southwest Region illustrated in the figures on the following pages can be viewed in more detail using the travel demand model software (CUBE) or ArcGIS. Attribute data for every link in the network is also available, including the following attributes:

A & B Attributes: Attribute 'A' indicates "from node" and attribute 'B' indicates "to node".

DISTANCE: This attribute contains the link distance. Values are in miles.

FTYPE: This attribute indicates the physical type of facility. Facility type is used as an index to the speed/capacity file to determine the free flow speed and capacity per lane of each link. Two digit facility type codes were used. **Table B.1** identifies the two-digit facility type codes as approved by the Florida Model Task Force.

ATYPE: This attribute indicates the land use characteristics of areas traversed by links. Area type is used as an index to the speed/capacity file to determine the free flow speed and capacity per lane of each link. Two digit area type codes were used. **Table B.2** illustrates the two-digit area type codes used in FSUTMS.

LANE: This attribute indicates the 2006 number of lanes per direction. This is one of three attributes used to calculate link speeds and capacities, the other two being facility type and area type.

DENSITY: This attribute indicates the number of vehicles that can stored on a given link. This is attribute is linked to the DISTANCE attribute. A 25 feet-per-vehicle length per lane was used to estimate the vehicle density on each link.

CAP: This attribute holds the per lane capacity of any given link. The capacities values are automatically populated from the Speed/Capacity lookup tables during the network processing stage.

RPC_TXT: This attribute identifies the RPC in which any given link is located.

RPC_NUM: This attribute identifies links numerically by RPC.

COUNTY_TXT: This attribute identifies in which County any given link is located.

COUNTY_NUM: This attribute identifies links by the County name

EVAC_RTE: This attribute indentifies if a given link is designated as an evacuation route by the respective RPC.

STATE: This attribute indentifies the state in which any given link is located.

CONTRA_PLN: This attribute identifies whether a given link is part of a facility that is part of a contra-flow plan.

CONTRA_LNS: This attribute identifies the number of lanes to be used for a given link during contra-flow conditions.

Section D

Behavioral Data

Reading the Planning Assumption Tables

Columns

Columns in tables represent threats posed by category 1, 2, 3, 4, and 5 hurricanes.

Rows

Rows in tables represent evacuation zones based on anticipated storm surge inundation: i.e., areas for which officials would issue evacuation notices due to the threat of storm surge and waves generated by category 1, 2, 3, 4, and 5 hurricanes. The sixth row in tables represents areas inland of the reach of storm surge inundation. Evacuation notices in inland areas (sixth rows of tables) would apply only to mobile homes and manufactured housing.

Cells

Cells in tables represent the evacuation behavior of residents living in the respective evacuation zone when faced with each of the five hurricane threats, e.g., response in a category 3 hurricane by residents living in a category 1 surge evacuation zone. All figures are percentages -- either percent of residents in the zone, percent of evacuees from the zone, or percent of available vehicles.

Table 1. Charlotte County evacuation rates for residents living in site-built homes

Charlotte Evacuation Rates (%)	Storm Threat Scenario				
Site-built Homes	Cat 1	Cat 2	Cat 3	Cat 4	Cat 5
Cat 1 Surge Evacuation Zone	40	55	60	75	85
Cat 2 Surge Evacuation Zone	30	50	55	70	85

Cat 5 Surge Evacuation Zone	5	10	15	50	60
Inland of Surge Evacuation Zones	5	5	10	15	20

Evacuation rate indicates the percent of residents who will leave their homes to go someplace safer from each zone in each storm threat scenario. Figures are based on the assumption that officials order evacuation for surge evacuation zones corresponding to storm category, plus all mobile homes and manufactured homes. Figures also assume that that the actual storm track passes very close to the area being evacuated. Shaded cells indicate shadow evacuation – evacuation from areas not included in evacuation notices.
